Weekly Weather Forecast

## Weekly Outlook - 8 November 2016

### Temperature

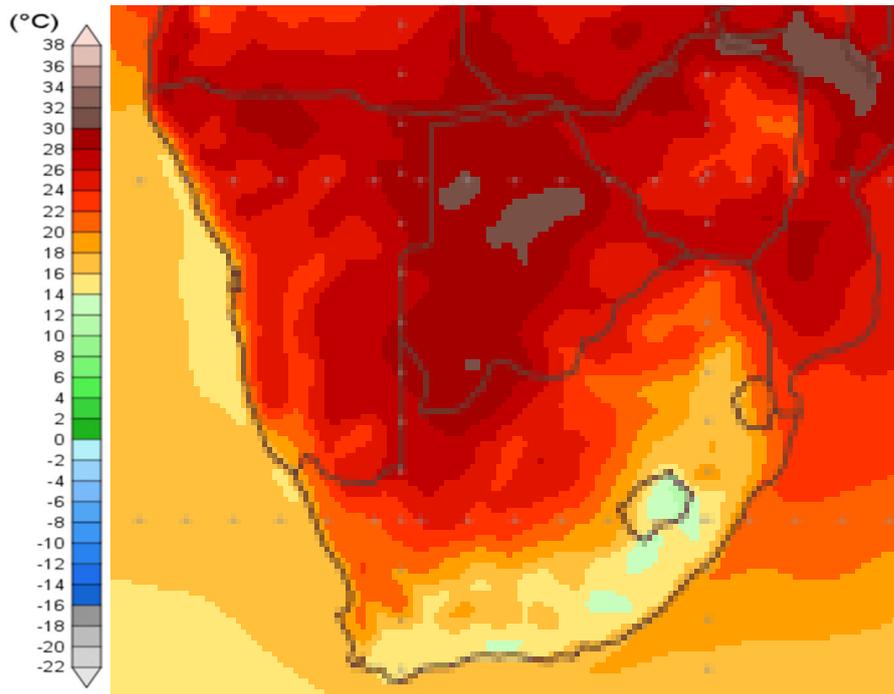

Figure 1: Mean surface temperature from Tuesday 8 November to Wednesday 16 November 2016

**Mean temperatures** for the week will be cooler compared to that for the previous week. Temperatures of 20 to 24°C (dark orange to red colours) are expected along the northern regions of South Africa, while cooler temperatures between 14 to 20°C are expected along the coastal areas of South Africa (yellow to light orange colours).

Note: (underline to bring attention to it) Temperatures reflect the average temperatures which includes both minimum and maximum temperatures for a day over an 8 day period.

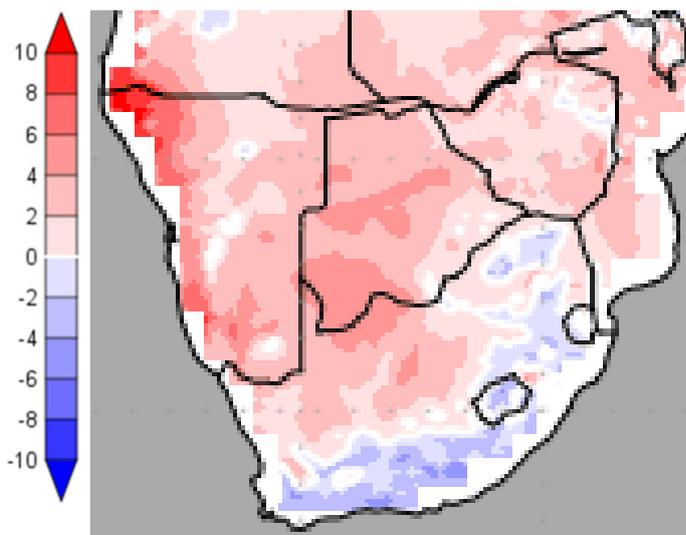

Figure 2: Temperature anomaly for Tuesday 8 November 2016 to Wednesday 16 November 2016

The Northern Cape, North West, Free State and parts of Limpopo will experience warmer than normal temperatures this coming week. The rest of South Africa will experience cooler than normal temperatures with normal temperatures expected along the coastal regions.

Temperature forecasts from the **National Centers for Environmental Prediction**.  
Normal Temperature derived from CRU monthly climatology for 1901 – 2000

# Rainfall

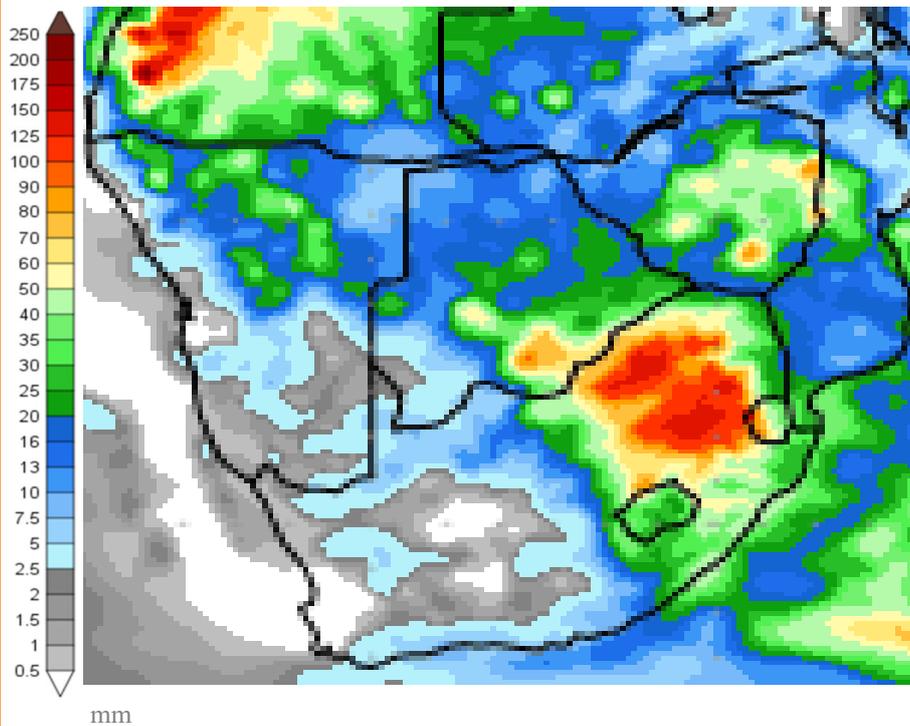

Figure 3: Precipitation for Tuesday 8 November 2016 to Wednesday 16 November 2016

Rainfall is expected over most of the summer rainfall region during the coming week. More than 100 mm is expected over most parts of North West, Gauteng, Limpopo and Mpumalanga. Between 30 to 50 mm is expected over KZN, while rainfall will gradually increase from 10 mm up to 100 mm as you move northwards over the Free State.

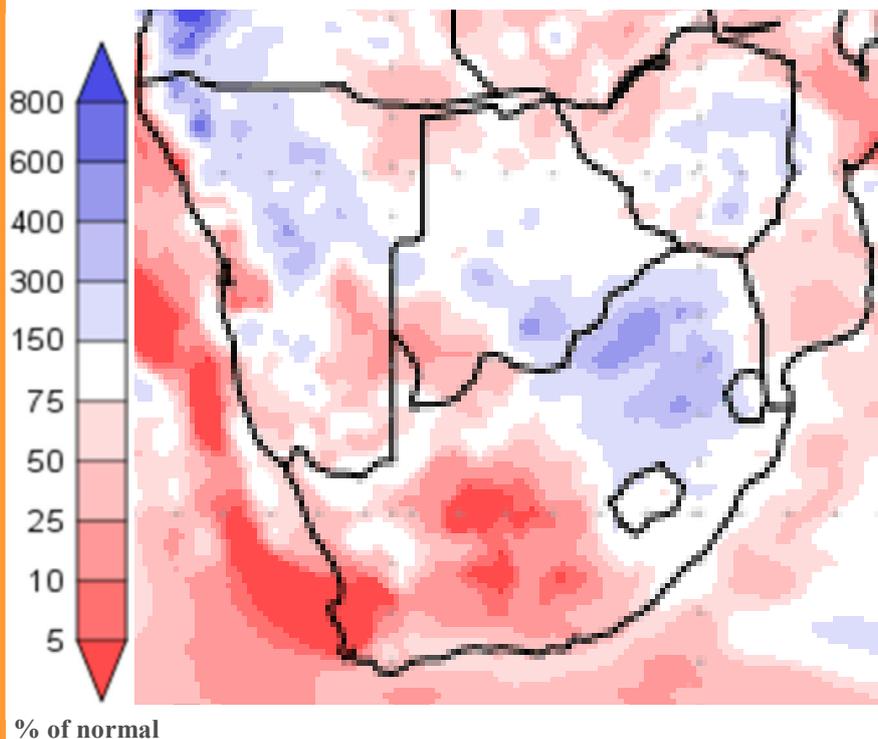

Figure 4: Precipitation (% of normal) for Tuesday 8 November 2016 to Wednesday 16 November 2016

Large parts of the summer rainfall region will receive normal to above normal rainfall. The northern region of the Eastern Cape and KZN will receive normal rainfall for this period. Isolated areas in the Northern Cape will receive normal rainfall. The rest of South Africa will remain dry.

Precipitation forecasts from the **National Centers for Environmental Prediction**.

Normal rainfall derived from CMAP monthly climatology for 1979 – 2003
